SUMMARY

Aspiring Frontend Developer passionate about building intuitive, responsive, and user-friendly web interfaces. Skilled in MERN Stack development with strong UI/UX understanding to create seamless digital experiences. Focused on clean code, performance optimization, and solving real-world problems through modern web technologies.

EDUCATION

- | | | |
|--|--|---------------|
| • B.E - Computer Science and Engineering | Kongu Engineering College, Perundurai | CGPA: 7.24 |
| • Higher Secondary Certificate | Kongu National Matriculation Higher Secondary School | 77.33% (2022) |
| • Secondary School Leaving Certificate | Kongu National Matriculation Higher Secondary School | 87% (2020) |

TECHNICAL SKILLS

- Programming Languages: Java, C, JavaScript
- Frontend: HTML, CSS, JavaScript, React.js
- Backend: Node.js, Express.js
- Databases: MySQL, MongoDB
- Cloud & Tools: AWS (EC2, S3), GitHub, Figma
- Concepts: UI/UX Design, Web Development, Frontend Development

AREA OF INTEREST

- Frontend Development
- Web Development
- UI/UX Design

PROJECTS

- Expense Tracker Application (April 2026 – May 2026)
Tech Stack: Spring Boot, React.js, MySQL, REST API, Java, CSS
 - Developed a full-stack expense tracking application with React.js frontend and Spring Boot backend
 - Implemented secure authentication system for user login and protected API access
 - Designed RESTful APIs for managing expenses including CRUD operations, filtering, and analytics
 - Built category-based analytics such as daily/monthly summaries and highest spending category using Java Streams
 - Followed layered architecture (Controller, Service, Repository, DTO) for scalable and maintainable code design
- Fake Review Detection System (Jan 2026 – Apr 2026)
Tech Stack: Python, Machine Learning, NLP, BERT, RoBERTa, DeBERTa
 - Developed an intelligent fake review detection system to classify online reviews as genuine or deceptive using Natural Language Processing techniques.
 - Implemented and compared multiple Machine Learning models including Logistic Regression, Random Forest, and Support Vector Machine (SVM).
 - Built transformer-based deep learning models using BERT, RoBERTa, and a Hybrid DeBERTa architecture for contextual text understanding.
 - Performed data preprocessing, feature engineering, sentiment analysis, dataset balancing, and model evaluation using Accuracy, Precision, Recall, and F1-Score metrics.
 - Achieved highest classification performance using the Hybrid DeBERTa model by combining contextual embeddings with linguistic feature extraction.

- Hostel Utility Service (Nov 2024 – Jan 2025)
Tech Stack: MERN Stack, Nodemailer
 - Complaint submission system for hostel maintenance, water, and electricity issues
 - Automated email notifications for complaint updates
 - Maintained digital logs for tracking and reporting

EXPERIENCE

- Freelance Frontend Developer – Pet Adoption System
 - Built an interactive React.js frontend for a Pet Adoption System with features such as pet search, filtering, and adoption requests.
 - Implemented reusable React components and optimized rendering for improved UI performance.
 - Integrated MongoDB data to display real-time pet information and adoption status updates.
 - Designed responsive user interfaces to ensure a seamless experience across devices.

CERTIFICATIONS

- MongoDB Associate Developer Certificate (Node.js)
- Java Hacker Rank Certificate

ACHIEVEMENTS

- Won 3rd Prize in Paper Presentation on the topic “Health Rate Monitoring Devices” at Kongu Engineering College.
- Won 3rd Prize in Logo Sculpture Event at Kongu Engineering College.
